

## International Conference on Innovations in Plastic Industry

International conference on “Innovations in plastic industry” were organized by AIPMA’s AMTEC on 24<sup>th</sup> March 2022 at Courtyard by Marriot hotel, Andheri Mumbai. AIPMA’s AMTEC is one of the emerging organizations in the country covering specific industry services when it comes to reverse engineering, 3D printing, product design, management consulting and plastic packaging technologies.

The conference was conducted with the support of MSME ministry, Government of India. The conference was attended by 250+ plastic industry professionals and the feedback from the attendees was highly appreciative for starting such an initiative for the plastic industry professionals to make them aware about the new innovations and technologies happening in plastic industry.

International conference involved the diverse group of international speakers and national eminent speakers & panelist from domain like reverse engineering, 3D printing, product design and plastic packaging technologies. Speakers from renowned organizations like Carl Zeiss India Ltd, Tata Autocomp Systems, Marico, Autodesk Simulation, FIPS, Stratasys & 3D systems India were a part of this interactive and informative conference. The conference not only guided the plastic industry professionals but also motivated them to implement these technologies in their organizations to leverage the export opportunity in plastic industry rather than depending on the imports.

Whether you are a polymer producer, mould maker, packaging expert or a designer or in general a plastic user like every one of us , we are sure everyone find the conference worthwhile as it was not only filled with data and statistics, but also with activities, initiatives and ideas on how to make our industry export ready.

In recent years, we have got more and more used to talk about challenges for our society and industry. And it is true indeed: the impacts of the pandemic come to mind first, followed by ever more ambitious targets and the massive task ahead. In fact, these challenges are too often seen only as obstacles. However, they are also huge opportunities for our industry to get export ready by utilizing these technologies.

#### **Outcome from the Conference:**

- Delegates from over 150+ companies attended the conference and this made them aware of the innovations and technologies happening in plastic industry. Delegates are eager to implement these technologies in their organizations.
- Delegates started enquiring about the AIPMA's AMTEC professional forum services for industry professionals and are eager to send employees from their organization to up skill them with the latest technologies in plastic industry.
- Many of the delegates and organizations are ready to attend such kind of events on innovations in plastic industry in the coming future which involves a wide array of speakers from different specialization.
- More than 200 companies are benefited by this event as they are planning to implement the new technologies in their organization by eliminating the old ones. The technologies and innovations shown during the course of conference are time saving and economical which gave a favorable response from the group of delegates.
- As per the delegate feedbacks, more of the organizations are confident now that after using these technologies it will give them a competitive advantage to tap for export opportunities.

#### **Key highlights of Conference:**

- 250+ Delegates were a part of this conference.
- Delegates from domain like packaging, mold making, designing, masterbatches distribution and mold manufacturing consultants gained insights on AIPMA's AMTEC professional industry services.
- Delegates from packaging domain have shown interest in AIPMA's AMTEC upcoming training program on plastics in packaging.

- Initiative to launch AIPMA's AMTEC professional forum offering industrial services to make plastic industry professional industry ready was highly appreciated by the professionals. Link is sent to all the delegates for knowing more about their interest on the services provided by AMTEC Professional Forum.
- Discussion on ground breaking technologies in plastic industry by distinguished group of speakers and panelist from esteemed organizations in the country.
- High response to participate in AIPMA's AMTEC professional forum services on topics like reverse engineering, 3D printing and product design was received during the course of conference.
